

PlantBox wall

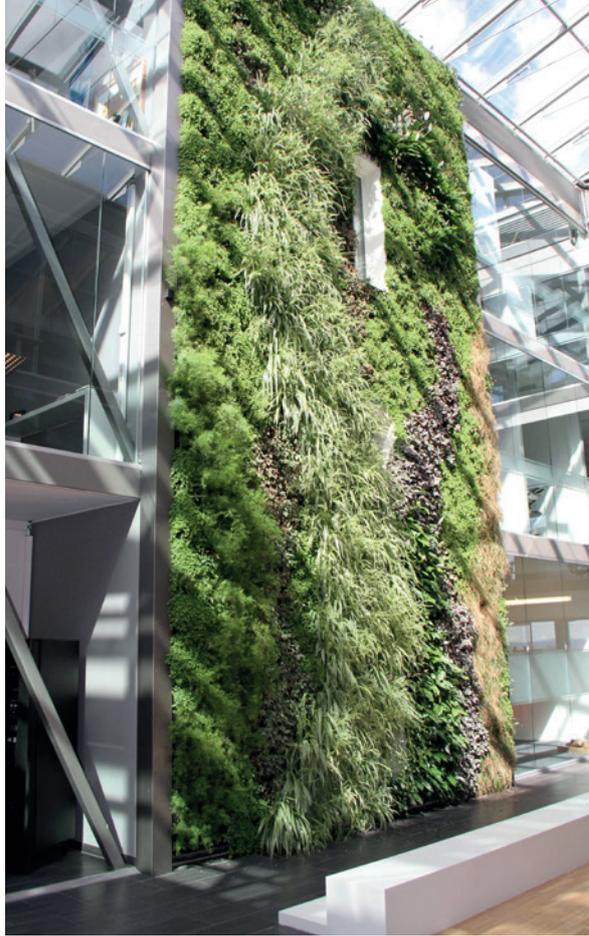

PlantBox | Interior green wall system

Plantbox is a system of sophisticated, self-watering modules that allow you to assemble a green facade in your home, in the office, in the production, in the store... The individual parts of the Plantbox connect in the horizontal direction, in the vertical direction they abut each other thanks to simple locks. Based on the dimensions of the module, it is possible to achieve an area that is a multiple of 600 mm in width and 200 mm in height. The total depth of the system is 150 mm, the individual parts are anchored directly to the load-bearing wall or the load-bearing structure of the pre-wall. The weight of one square meter of the green facade in the saturated state is around 70 kg.

System installation is very simple. Each module has holes for anchoring in the rear panel. In the vertical direction, it is sufficient if every third module is anchored directly to a load-bearing wall. No additional waterproofing is required, the system itself is perfectly waterproof.

PlantBox | It can also be combined with glazed partitions ▶

THOUSANDS OF PLANTS

You can choose from an inexhaustible number of plant species that can be planted in the wall.

GREEN WALL LIGHTING

Plants will be even more beautiful and green.

EASY MAINTENANCE

Watering is solved manually or automatically. In the manual case, the flowers only need to be flown once every 14 days.

CONECTION WITH OUR PARTITIONS

Glass and plants complement each other perfectly and thus create a unique interior.

NOISE REDUCTION

Green walls absorb noise.

HIGHER AIR QUALITY AND HEALTH

Plants in the interior clean the air and maintain pleasant humidity.

INTERIOR SOLUTION

Our partitions together with the green walls will make your interior unique.

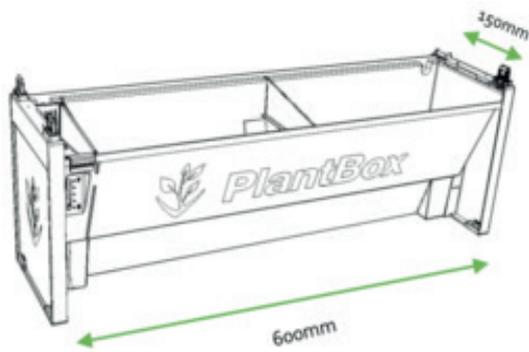

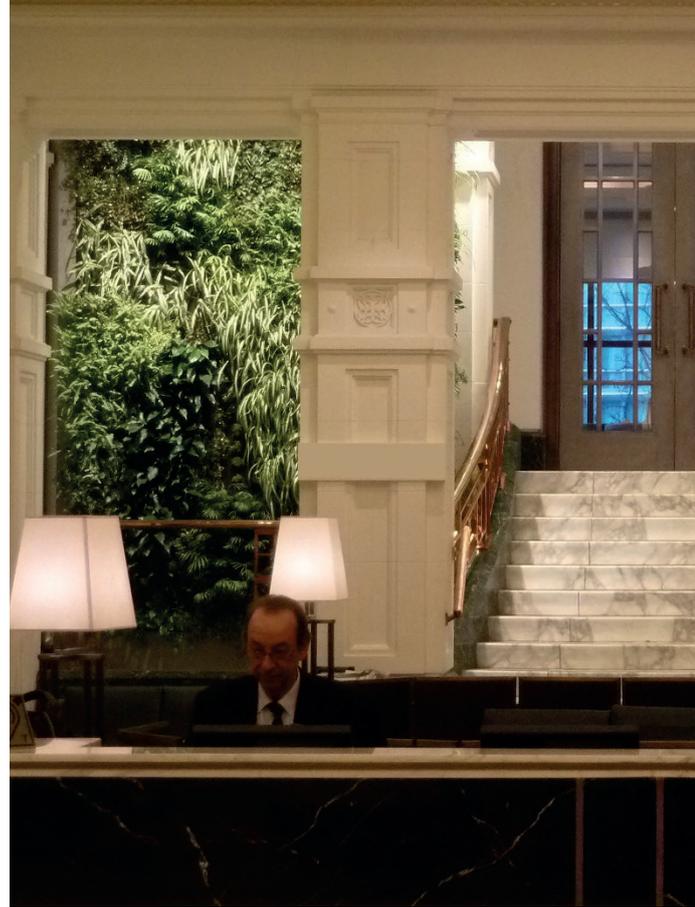

PlantBox | Watering

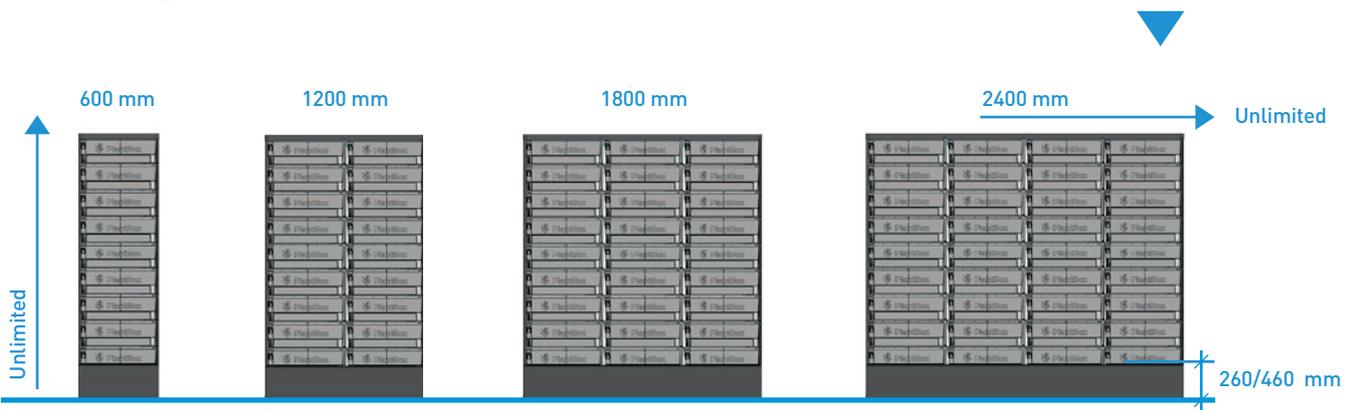

Water is always fed to the highest Plantbox, as soon as its water storage space is saturated, the water gravitationally falls into the next floor of the „boxes“.

Watering can be solved both manually and automatically. It can be filled with a common substrate. Use indoors or outdoors for growing flowers, herbs, or creating your own green wall.
